

ENVIRONMENTAL and ENERGY POLICY

Olgun Celik who shows innovative approach for technological improvement of industry sector has mission that leave a cleaner, more efficient use of resources with energy efficiency and sustainable environment with a circular approach to future generations by big responsibility to the society and its employees.

The goal and objectives related to the policy to achieve this task and to provide continuous improvement by:

- ◇ Work to continuously improve environmental and energy management systems and energy performance,
- ◇ To increase the awareness of our employees, stakeholders, society and our whole value chain on resource efficiency, energy efficiency and environmental issues,
- ◇ Establishing the necessary goals and objectives for the efficiency of energy management systems and increasing performance of environmental and energy , performing several activities in this process, providing sources to achieve goals and objectives, monitoring the system and continuous improvement,
- ◇ To implement with the requirements by following applicable international and local legal, regulation and other conditions related to energy efficiency, energy usage, energy consumption and environment.
- ◇ To prevent and control our possible impacts on the environment and environmental pollution, to reduce the resulting effects and to be a pioneer for the other sectors in the field of environment and energy.
- ◇ To determine environmental contingencies and risks and to take precautions of them,
- ◇ Managing the environmental and energy risks related to the planning of new investments or changes in existing investments,
- ◇ To reduce GHG emissions from production activities and to increase air quality with energy efficiency by using renewable and sustainable energy sources,
- ◇ For a sustainable environment, to reduce water consumption and to recycle or reduce waste,
- ◇ Using natural resources efficiently,
- ◇ To prioritize that using harmless chemicals and subcomponents are taken where applicable,
- ◇ To purchase product, service and technology which providing energy efficiency,
- ◇ To protect biodiversity, soil quality, forestation and land use for a sustainable world,
- ◇ To protect the environmental and noise emissions during production,
- ◇ We are committed to prioritizing energy efficiency in new technologies to be used, new products to be produced, new processes to be created and investments to be planned.
